

Chapmans in the 1870 Vermont Census

Data extracted by Irene Miller.
Computer input by Judy Jefferson.

Arranged by county, page and dwelling.

For most subjects the age is expressed in years immediately after the sex entry. In some cases - particularly with infants - the age is expressed in months in which case the age column is blank. When the age is expressed in months it is in the next seldom used column immediately after age. In 1870 the census taker was also supposed to record the month of birth and that is shown, in the next column.

Color is shown after the age data. It is assumed to be white unless otherwise specified.

Birthplace is shown with the approved postal abbreviations for states in the U.S.

Foreign places, when applicable, were abbreviated as follows: PR = Portugal, BV = Bavaria, CD = Canada, EN = England, HN = Hanover, IR = Ireland, SW = Sweden, WG = Wurtenburg, FR = France, GM = Germany, etc.

More data was collected in 1870 than in any prior year.

The information is coded as follows:

S = in school this year. A number in the second two spaces indicates the month of the census year in which the subject was married. In some cases marriage within the year was indicated but the month was not given. R = can't read and W= can't write. V = eligible to vote.

If either of the parents of the subject was foreign born then an F denotes the father was and an M that the mother was.

Microfilm is National Archives Series M593. Roll numbers are identified in each family header.

Column headings not meant to line up exactly over the data but rather to give position relationship
